
CISA - Certified Information Systems Auditor (CISA)

Overview

Course Code	CISA	Duration	5.0 days
-------------	------	----------	----------

In this course, you'll cover all five domains of the Certified Information Systems Auditor (CISA) exam and gain the knowledge and technical concepts required to obtain CISA certification. Since its inception in 1978, the CISA exam has become the gold standard of excellence in IS auditing, control, and security. Our experts have created a study guide of relevant, up-to-date information, including summary charts, insightful data, and practice exams.

Audience

IS audit, control, assurance, and security professionals, including IT consultants, auditors, managers, security policy writers, privacy officers, information security officers, network administrators, security device administrators, and security engineers, who have five years of experience with audit, IT systems, and security of information systems.

Pre-Requisites

- Systems administration experience, familiarity with TCP/IP, and an understanding of UNIX, Linux, and Windows.
- This advanced course also requires intermediate-level knowledge of the security concepts covered in our Security+ Prep Course.

Key Topics

Module 1: The Process of Auditing Information Systems

Module 2: Governance and Management of IT

Module 3: Information Systems Acquisition, Development and Implementation

Module 4: Information Systems Operations, Maintenance and Service Management

Module 5: Protection of Information Assets

Objectives

- Gain a better understanding of IS audit and assurance guidelines and standards.
- Develop a working knowledge of the five domains of CISA.
- Learn the strategies utilized by successful CISA exam takers.
